                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 8 ITGLILG---ASLILSIGPONVLV----IKQGIKR--EGLIAVLLVCLISDVFLFIAGT 57
J. Biol. Chem. 275:33084-33090 (2000).

-!- FUNCTION: This is a component of the phosphoenolpyruvate-dependent sugar phosphotransferase system (FTS), a major carbohydrate active-transport system. The IICD domains contain the sugar binding site and the transmembrane channel; the IIA domain contains the primary phosphorylation site (the donor is phospho-HPr); IIA transfers its phosphoryl group to the IIB domain which finally transfers it to
                                                                                                                                                                                                    -!- PATHWAY: N,N'-diacetylchitobiose utilization.
-!- SIMECELULAR LOCATION: Integral membrane protein. Inner membrane.
-!- INDUCTION: By N,N'-diacetylchitobiose.
-!- SIMILARITY: Contains 1 FTS ELIC domain.
-!- CAUTION: Was originally (Ref. 4) characterized as part of a cryptic cel operon for a cellobiose degradation system. The Cel+ phenotype is due to mutations making expression chitobiose-independent and altering the substrate specificity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               SVAALLVALFNLGIATLIYLPFVVVANKAQNAIDKEESEED

Natl. Acad. Sci. U.S.A. 89:519-523 (1992).
-!- FUNCTION: Plays a major role in cell wall biogenesis.
-!- CATALYTIC ACTIVITY: UDP-N-acetyl-D-glucosamine + { (1,4) - (N glucosaminyl) } (N) = UDP + { (1,4) - (N glucosaminyl) } (N+1).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Bowen A.R., Chen-Wu J.L., Momany M., Young R., Szaniszlo P.J.,
